THERE IS LIGHTING. AND THERE IS ZUMTOBEL LIGHTING.

We develop and produce light with passion – light that empowers people to realise their vision and bring architecture to life. In our pursuit of perfection, we constantly push boundaries: with timeless design, technical excellence, outstanding craftsmanship and efficient light output.

We know that light creates spaces in which people can grow and thrive. Light inspires. It awakens emotions, inspires our imagination and creates spatial experiences that have a lasting effect.

In the development of future generations of luminaires, we think beyond known boundaries. Our lighting is created for you – and for your individual needs. It opens up new perspectives and accompanies you into a world full of possibilities.

A PARTNER FOR PARTNERS

Our goal is to noticeably improve the quality of life through light. People are at the centre of everything we do. Partnerships have always had a special value for us – because excellent solutions are created in cooperation with people who share our vision. Day after day, we work to be an agile, responsible and experienced partner that develops innovative lighting solutions and sets sustainable impulses.

AGILE

As an agile partner, we know that there are many ways to achieve a goal. That's why we listen carefully and take the wishes of our partners seriously. With THE EDITIONS, we offer exceptional luminaires that are developed beyond the standard – tailor-made for special architectural requirements. Innovation, versatility and individuality define who we are. Our Digital Services transform networked architecture into a learning ecosystem – with sustainable, flexible and future-proof lighting solutions that create added value beyond the classic product concept.

RESPONSIBLE

As a responsible partner, it is important to us to act reliably and in a trustworthy manner. We foster open and transparent collaboration with customers, suppliers and partners – and always operate with an eye on ecological, social and economic impacts. For us, sustainability is much more than energy saving. It starts with the design of our products and encompasses their entire life cycle. We bear responsibility along the value chain from resources and material use to long-term effective solutions such as remanufacturing.

EXPERIENCED

As an experienced partner, we rely on our well-founded light and application know-how, which we have continuously developed over many years. We strive for premium quality in every detail – from the quality of our luminaires to our consulting, planning and service. We are happy to share our knowledge and offer a wide range of training programs for our partners. With our Active Light concept, we create the framework for developing lighting solutions that are consistently geared towards people.

UNIQUE LIGHT. PROVEN STANDARDS.

Intuition and experience. Foresight and deep expertise. Curiosity and the courage to think new things. At the interface of unconventional ideas and established processes, we create individual lighting solutions for our customers. Whether design, architecture, construction, lighting planning, product management or marketing: our experts work together across disciplines to develop forward-looking solutions that excel both functionally and set new standards in terms of design. Our goals are clear: understand current market needs, translate customer requirements into tailor-made lighting solutions and transfer innovative ideas into tomorrow's product portfolio.

VISIONARY

Daylight is never static. High-quality artificial light mirrors the dynamics of daylight – and changes to suit the living spaces and architecture around us. From digitalisation and immersive experiences to sustainability and New Work: current trends inspire us to constantly reinvent light, while agile processes help us to create unique lighting solutions for future challenges.

INDIVIDUAL

We love wishes that are out of the ordinary – and customers who inspire us to further develop our luminaire portfolio. From the initial idea to the technical concept and design draft to prototyping and series production, we accompany and design the entire product life cycle of innovative lighting solutions from a single source.

EXTRAORDINARY

For us, this means combining aesthetic design, high-quality materials and technical innovations into a coherent whole. To create unique lighting experiences, we work with outstanding personalities from the fields of design, lighting design and engineering – people who challenge the status quo in order to make new things possible.

ZUMTOBEL. THE LIGHT.

The PANOS III deco accessories are made from up to 75% recycled or bio-based polycarbonate in 3D printing. They are recyclable at the end of the product life cycle, making them optimal for circular concepts.

CREATING LIGHT CREATES TIMELESSNESS

Lighting solutions from Zumtobel are your key to the architecture of tomorrow. We see light holistically and create lighting solutions that excel, and go far beyond energy efficiency. Our products also feature timeless design, future-proof technology and reusable components to form sustainable lighting solutions with lasting value.

Sustainability at Zumtobel

OUR INITIATIVES

THE PILLARS OF SUSTAINABILITY

Life cycle and EPDs

Thanks to environmental product declarations, Zumtobel provides complete transparency about the ecological footprint of our luminaires. The focus is on CO₂ emissions data, a solid foundation for the EU's decarbonisation goals.

Circular economy and CDRs

We incorporate the circular economy from the very beginning: the Circular Design Rules provide guidance to ensure that materials, design and offerings are geared towards circular use from the outset.

Refurbishment

With our refurbishment kits, existing luminaires can be retrofitted quickly and easily – either as a standard solution or tailored to your individual needs. Countless projects demonstrate how effectively resources can be preserved and CO₂ reduced.

Remanufacturing

Our standardised remanufacturing service ensures the highest performance across multiple life cycles, lowering your total cost of ownership (TCO) while helping you meet your sustainability goals.

LIFE CYCLE AND EPDs: TRANSPARENCY OVER THE ENTIRE LIFE CYCLE

Zumtobel brings over ten years of experience in environmental product declarations and embraces product transparency as an integral part of its sustainability standards.

We provide Environmental Product Declarations (EPDs) in accordance with the ISO 14025 standard for our luminaires throughout their life cycle, including materials, manufacturing, transportation, use and disposal.

By transparently communicating the environmental impact of our products, we enable our customers to make informed and sustainable decisions and have been able to successfully support sustainable construction projects and green building certifications worldwide.

We create added value through EPDs in the following areas:

LEGISLATION

Regulatory compliance

EPDs help companies comply with environmental regulations and reduce legal risks.

Digital Product Passport

The data from EPDs will serve as the basis for this new regulation, which aims to increase transparency throughout the entire life cycle of products.

CONSTRUCTION INDUSTRY

Green building certifications

EPDs help achieve sustainability certifications such as LEED and BREEAM.

CO₂e data

EPDs enable the calculation of CO₂e emissions at the product level. They serve as a data basis for calculating CO₂ emissions at building level as well.

CONSUMER/PLANNER

Decision-making

EPDs allow a direct comparison of the environmental impact of different products.

Transparency and trust

Independent verification and publicly shared data on the product's environmental impact enhance trust and transparency.

Achieving sustainability goals

EPDs help align new purchases with specific environmental or sustainability goals.

EPBD: ENERGY EFFICIENCY AS AN OPPORTUNITY

Intelligent lighting. Acting sustainably.

At Zumtobel, efficiency is more than just a feature; it is at the heart of our lighting. Every beam, every lumen, is designed to achieve maximum impact with minimum energy input. Our lighting intelligently adapts, enhancing environments and creating lasting experiences. Light thus becomes a force that is as responsible as it is inspiring.

The EU's Energy Performance of Buildings Directive (EPBD) sets clear requirements for the energy performance of new and existing buildings. For companies, this means higher requirements, but also enormous savings potential. With Zumtobel at your side, you not only meet these standards

– you benefit from them. Our highly efficient lighting solutions reduce primary energy requirements, lower operating costs, and can be seamlessly integrated into renovations or new buildings. In this way, energy savings, cost advantages and future security become one.

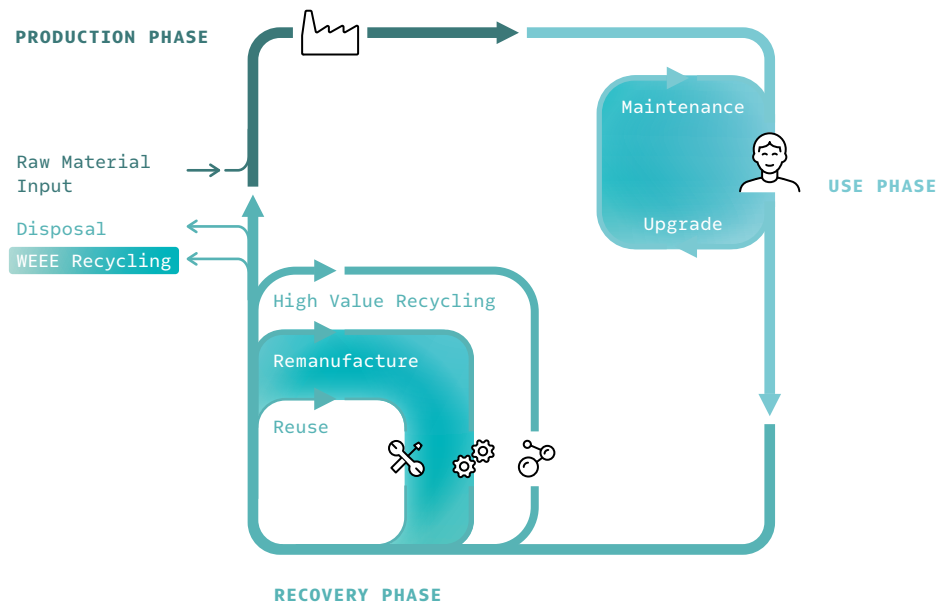

CIRCULAR ECONOMY AND CIRCULAR DESIGN RULES (CDRs)

Decoupling value creation from resource consumption.

At Zumtobel, we rely on the principles of the circular economy to extend the life cycles of our products. Using our Circular Design Rules (CDRs), we design our products from the outset to enable reuse, repair and recycling. With our high standards of quality and durability, we create circular lighting solutions that not only have the present in mind, but also the future.

ZUMTOBEL CIRCULAR SERVICE NAVIGATOR

Zumtobel Products in the Circular Economy

OUR CIRCULAR DESIGN RULES ARE BASED ON THREE PILLARS

Circular Sourcing creates transparency in the “circular economy”. The “quality” of materials is ensured by systematically querying suppliers about recycled content, recyclability and, if applicable, environmentally critical substances. This results in a comprehensive data pool, which, for example, allows for the determination of recycled content at the product level.

Circular Design integrates circular principles into product development from the very beginning. Design teams focus on key issues such as ease of disassembly, durability and availability of spare parts. A well-thought-out design enables later modernisation, reuse or effective recycling.

Circular Services shapes the transition to the next cycle through processes, business models and offerings to extend service life. For Zumtobel, the focus is on maintenance and modernisation, as well as remanufacturing. Spare parts, retrofit kits and so-called refurbishment kits are offered to extend product life.

The New York Times, New York | US

SUSTAINABILITY THROUGH RENOVATION

High power consumption, lack of spare parts for outdated luminaires and new EPBD requirements make modernisation essential. Especially for buildings in their second life cycle, reducing CO₂ emissions and using existing spaces flexibly are becoming increasingly important. With our refurbishment kits, we offer fast, streamlined solutions – available in standard or custom versions – closing a critical loop in the circular economy by conserving resources and making your building fit for the future.

On page 204, you can find our refurbishment kits at a glance:
SLOTLIGHT, TECTON, PANOS RETROFIT, CLARIS evolution,
CLEAN, MIREL, ONDARIA, ZX/ZX2

ZUMTOBEL REMANUFACTURING

THE FUTURE OF LIGHTING IS CIRCULAR

At Zumtobel, peak performance does not stop when a product reaches the end of its first life cycle. Thanks to our Circular Design Rules, we develop our luminaires from the ground up in a modular and dismountable way. The result is a standardised, industrial remanufacturing process that conserves resources while delivering state-of-the-art technology.

SUSTAINABLY PLANNED FROM THE OUTSET

The remanufacturing concept is part of our circular service offerings and is already firmly anchored in the planning of your new project. In this way, you can secure the value of your investment for the future, today.

WHAT DOES REMANUFACTURING MEAN TO YOU?

Instead of replacing an entire lighting installation, robust and durable components such as housings and lenses are given a second life. We upgrade your existing luminaires directly with the latest electronic components, state-of-the-art LEDs and high-efficiency drivers.

Future-proof technology

You benefit from higher light output and efficiency compared to the original product.

Double the lifespan

By renewing the key components, we extend or even double the useful life of your lighting solution.

Uncompromising quality

Remanufactured products undergo the same strict quality controls as our original products. That's why we offer you the full Zumtobel new-building guarantee here as well.

YOUR BENEFITS AT A GLANCE

Resource protection

Long-lasting components are retained over several cycles of use.

CO₂ reduction

30% to 50% material CO₂ savings compared to a new purchase.

Verified transparency

An official remanufacturing EPD (Environmental Product Declaration) is documented for each remanufacturing project – perfect for your sustainability footprint.

PANOS III

VIVO II

CRAFT II

We offer remanufacturing for these products

REMANUFACTURING READY TURNKEY LIGHTING

Start with sustainable circular performance today and stay flexible for tomorrow. With our Remanufacturing Ready Turnkey Lighting concept, you benefit from a solution that supports sustainable remanufacturing as a service while maximising long-term value and performance.

THE CHALLENGE

Delivering measurable CO₂ reduction while maintaining future flexibility remains a key challenge today. Many lighting solutions are rarely designed for reuse, limiting both impact and long-term value. The result is a gap between your current requirements and the demands of tomorrow: a solution that delivers impact now and provides freedom to evolve.

THE SOLUTION

Our Remanufacturing Ready Turnkey Lighting solution is designed to support future remanufacturing from day one. It combines carefully selected luminaires designed for remanufacturing with a turnkey installation approach based on reuse principles. A contractual option secures your right to remanufacture products after their first use cycle, giving you a clearly defined pathway for future action. Circularity is built in from the start, while the timing and implementation remain entirely your decision.

HOW IT WORKS

Your project starts with remanufacturing products and a future oriented installation. During operation, the Circular Service Agreement becomes the central element and provides regular inspections, condition monitoring and transparent CO₂ tracking across the entire life cycle. Based on these insights, you can decide at any time whether to continue operation, upgrade components or initiate remanufacturing, ensuring reliable performance, renewed product quality and verified environmental impact.

CO₂ CALCULATION SERVICE

Understand and reduce your carbon footprint with a simple, reliable approach to CO₂ measurement. Our CO₂ Calculation Service provides clear insights into the emissions linked to your lighting installation and usage, helping you support your sustainability goals. We collect and analyse key data to deliver standardised CO₂ calculations across the full life cycle – from installation to operation. This helps you identify reduction opportunities, compare scenarios and make informed decisions with confidence.

Clear data. Measurable impact. Better decisions.

LIGHT AS A SERVICE (LAAS)

Reduce your environmental footprint with a smarter approach to lighting. With Light as a Service, you benefit from energy-efficient solutions that lower CO₂ emissions and support a circular economy without the responsibility of owning or managing the installation. We design, install, maintain and optimise your system to deliver reliable performance throughout its life cycle. Flexible models including pay per lux, rental and financing keep costs predictable while you stay focused on your core business.

Efficient, sustainable, hassle-free lighting.

TECHNICAL SERVICES

Our lighting management services are designed to maximise sustainability and long-term performance. Built on our systems such as Keyture, lightingGo and others, we support you throughout the entire life cycle. From intelligent control design and professional commissioning to tailored aftersales and maintenance, our services help optimise energy use, reduce CO₂ emissions and ensure reliable performance as your needs evolve.

Smart control. Sustainable performance.

Lighting solutions for every application.

Whether office, educational institution, healthcare, industry, retail or art and culture – every application places specific requirements on the lighting. Zumtobel offers innovative, energy-efficient and aesthetically sophisticated lighting solutions for all these areas, which not only create optimal visibility but also promote well-being, enhance safety and emphasise architectural concepts. Discover our diverse application solutions – perfectly tailored to your specific needs.

ART BECOMES AN EXPERIENCE WITH LIGHT

Light is more than brightness – it is a source of inspiration for new ideas. In times of artificial intelligence, immersive exhibitions and digital transformation, light creates orientation between reality and virtuality. It connects generations, promotes inclusion through barrier-free design and makes rooms interesting for the youngest through emotional spaces. Intelligent lighting solutions increase safety and support damage prevention. Light thus becomes the key to sustainable, inspiring future spaces.

INCLUSIVE EXHIBITIONS

Light makes museums truly inclusive: with glare-free, high-contrast and easy-to-read illumination, content becomes accessible to people with different viewing habits. Clear lighting creates orientation, reduces barriers and strengthens the feeling of safety. This is how exhibitions are created that promote participation, arouse emotions and actively involve visitors of all generations.

DAMAGE PREVENTION

Light is indispensable in museums – and at the same time a risk factor. UV and infrared radiation, high illuminance levels, and long periods of exposure can irreversibly damage organic materials such as paper, textiles or paintings. Colours fade, fibres become brittle, and surfaces change permanently. The decisive factor is therefore a sensitive lighting concept: reduced lux values, targeted accentuation, filter technology and intelligent controls minimise the burden.

IMMERSIVE EXHIBITIONS

Immersive exhibitions thrive on atmosphere – and light is their most powerful tool. It shapes spaces, directs lines of sight and creates emotions that make content tangible. Dynamic scenarios, projections and targeted contrasts allow visitors to immerse themselves instead of just looking at them. Light combines architecture, exhibits and media to create a holistic experience, and determines how intensively a story is perceived.

Website

Projects

A photograph of a modern retail clothing store interior. The space features a curved wooden platform in the foreground. A large digital screen on the left displays a woman's face and text. In the background, a mannequin stands on a raised platform, surrounded by clothing racks and shelves. The ceiling is dark with numerous track lights. The walls are decorated with blue and white patterns.

LIGHT DESIGNS EXPERIENCES

Light enriches the shopping experience and creates brand identity – experience, adaptivity, sustainability and connectivity. With the right light, you can create emotional experiences for your customers. With target-group-oriented and brand-differentiated lighting, they create a feel-good atmosphere that increases the dwell time and encourages purchases. Retail worlds can provide a high-quality experience where lighting solutions become an essential element of the brand message. We humans make over 95 percent of all decisions unconsciously. Light and the resulting product presentation in a spatial context can make a significant contribution to a positive decision.

1

EXPERIENCE THROUGH LIGHT

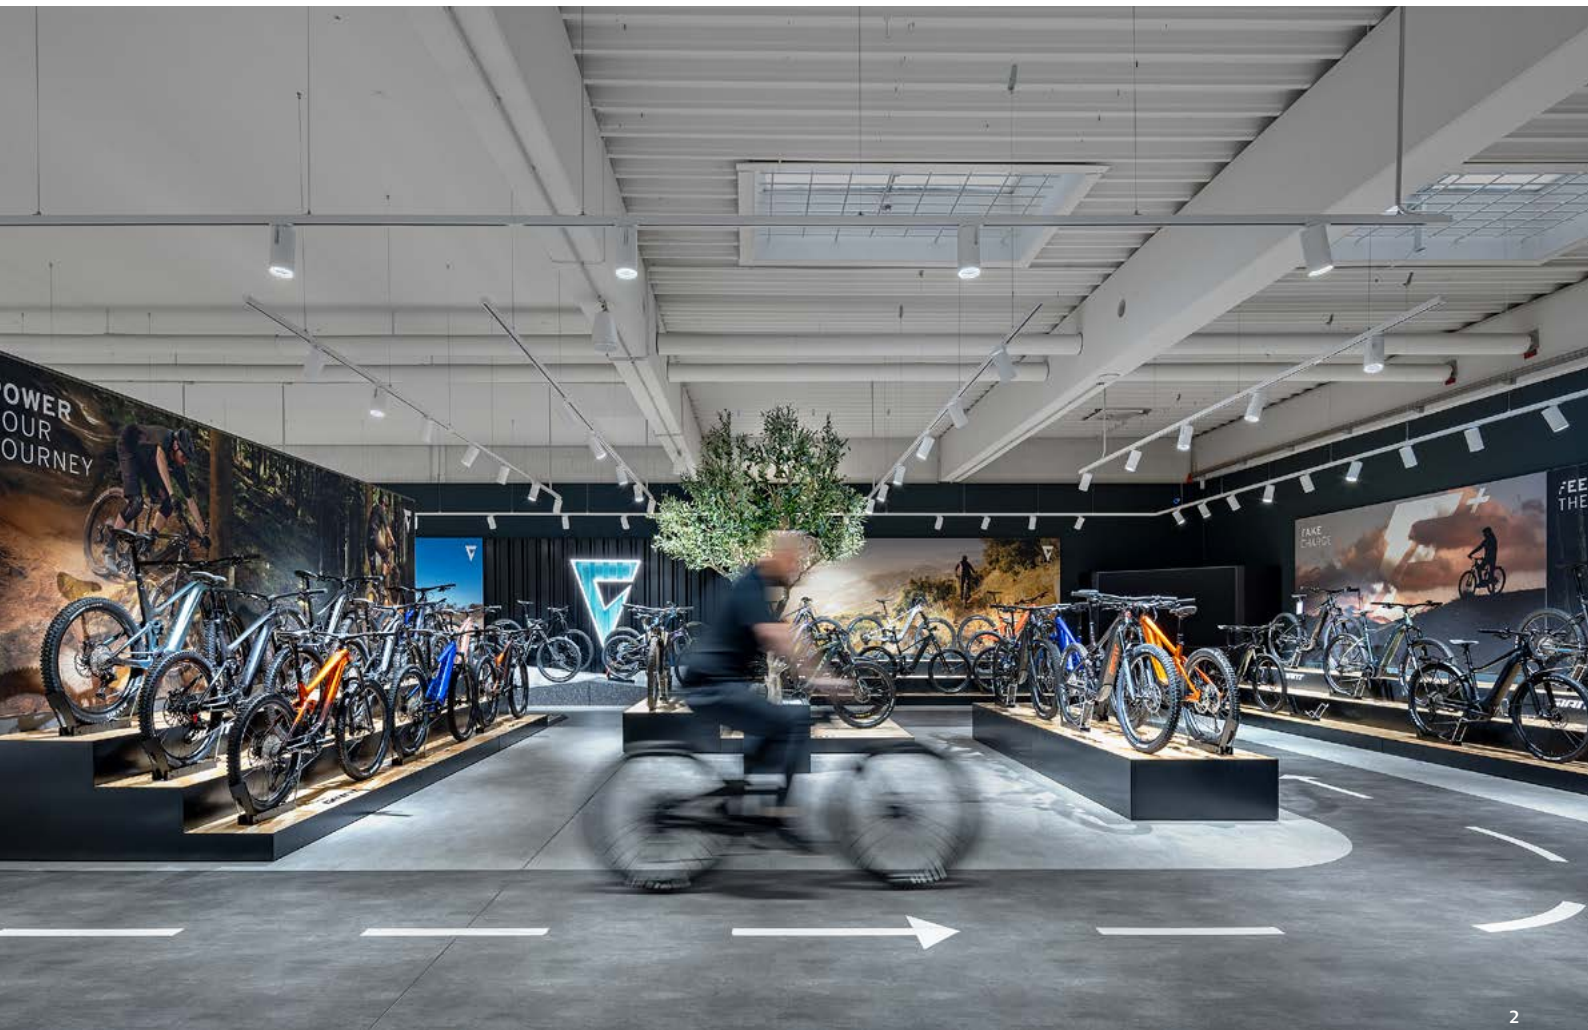

In experience-oriented retail, the point of sale is developing into an adventure space. Light shapes the atmosphere, stages products and strengthens brand identity. Through the combination of accent lighting, vertical and atmospheric lighting, stagings are created that showcase materials and colours authentically and inspiringly. Stores evoke emotions, provide orientation and guide customers along the shopping journey.

ADAPTIVE EFFICIENCY

Retail space is changing faster than ever. New collections, seasonal campaigns and flexible presentation concepts require lighting solutions that adapt flexibly. Modular lighting systems, conductor rails and interchangeable optics enable precise light staging. Efficient LED technologies and standardised lighting solutions ensure cost-effective planning, consistent quality and easy roll-outs via international store networks.

CONNECTED SUSTAINABILITY

Modern lighting is integral to the infrastructure in retail. Networked lighting systems, integrated with sensors, enable dynamic lighting scenarios and optimise energy consumption as well as operational processes. Sustainability is achieved through energy-efficient LED technology, durable designs and transparent product information, thus conserving resources and reducing operating costs.

INSPIRING OFFICE LIGHTING FOR CREATIVE MINDS

Sustainable office architecture and the associated lighting solutions focus on the needs of users and take a holistic approach to lighting quality. Zumtobel uses light and smart building technology to increase the added value of office buildings, while simultaneously ensuring that working and environmental conditions are always better adapted to people: for improved well-being, higher productivity and an atmosphere that supports creative exchange. Light is the common denominator for decarbonisation, profitable business activity and human sustainability.

INCLUSIVE LIGHTING DESIGN

Putting people first: we design workplaces that embrace diversity and dismantle barriers. Our dynamic, human-centred lighting goes beyond illumination, from Tunable White to Z-Spectrum, supporting natural circadian rhythms, enhancing well-being, and bringing the essence of nature into every space. Intelligent lighting control seamlessly combines comfort and sustainability, creating environments where people can thrive and unlock their full potential.

LIGHT MATTERS. ACOUSTICS DO, TOO.

The environments we work in have a profound impact on how we feel and perform. Background noise and conversations can increase stress, reduce focus, and affect both well-being and health. That's why acoustic comfort is a key element of the modern workplace. True quality of space is created through the harmonious integration of lighting and acoustics. By taking a holistic approach, we enhance focus, support well-being, and create spaces where people feel comfortable, connected and inspired.

FLEXIBILITY AND FUTURE-PROOFING

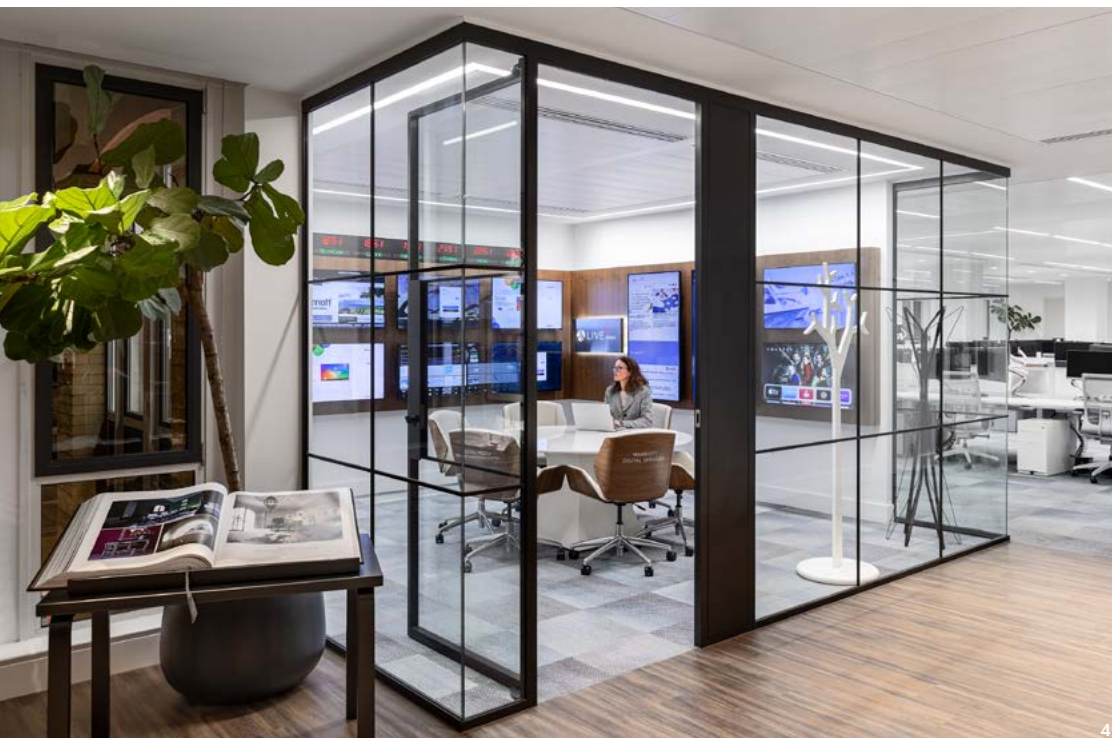

Today's workplaces are constantly evolving. Teams grow, activities change and office layouts need to adapt to new ways of working. Lighting should be just as flexible. Modular, adaptable solutions can be easily reconfigured, expanded and updated to support multifunctional spaces without compromising performance or design. Built for longevity, they remain reliable across changing requirements and technological advances, making them an essential foundation for future-ready workplaces.

LEARNING SPACES WITH BRILLIANCE

Today's education and knowledge transfer are the basis for tomorrow's success. Future-proof schools, universities and educational establishments create spaces in which people can acquire knowledge independently, interact with teachers and school or university peers and experience learning as a positive, lifelong process. Light is part of the room's ambience and thus directly influences the knowledge acquisition process: concentrate, be productive and stay productive.

1

CREATE FAVOURITE PLACES FOR LEARNING

Needs, perspectives and experiences of children at the centre of the design. Educational architecture contributes to learning success as a “third pedagogue”. Light and space play a key role in this by dynamically supporting a wide range of requirements.

FOCUS ON CONCENTRATED LEARNING.

Concentration is not a product of chance. It is the result of the subtle interplay of numerous factors that make it easier for learners to remain attentive and controlled. The senses of sight and hearing in particular play a decisive role here. Lighting solutions that integrate both daylight and acoustic challenges into their concept contribute to an atmosphere that promotes concentration.

INCLUSION MADE EASY

Light that brings people together and creates orientation, safety and well-being – especially in inclusive learning environments. Well-thought-out lighting concepts create schools in which all children feel equally supported and welcome. Glare-free, harmonious light promotes concentration, facilitates perception and creates an atmosphere that strengthens individual learning and joint cooperation.

OPTIMAL LIGHT FOR PERFECT RESULTS

In networked Industry 4.0, lighting not only serves as orientation, but also as an intelligent infrastructure for sensor technology, data acquisition and navigation. Lighting solutions that are tailored to people and their individual activities increase efficiency, promote productivity and support well-being in the workplace. High operational reliability and low maintenance requirements ensure sustainable cost-effectiveness.

1

FUTURE-PROOF LIGHTING SOLUTIONS

Modern industrial lighting becomes a strategic success factor for smart production environments. Rising energy prices and complex production processes require networked, efficient lighting solutions. Zumtobel offers holistic concepts with dimmable systems, intelligent lighting management and integrated sensor technology. This creates transparency, security and cost-efficiency – the basis for sustainable, future-proof IoT applications.

HUMAN-CENTRIC LIGHTING

Biological light that puts people at the centre: by dynamically simulating the natural course of daylight, Human-Centric Lighting supports the circadian bio-rhythm. Zumtobel ensures less fatigue, more concentration and greater well-being, especially in 24/7 companies and when working shifts. This increases safety, motivation and the quality of production in the long term.

ROBUST LIGHTING SOLUTIONS

Industrial and craft businesses need lighting that can withstand extreme conditions. Zumtobel develops resilient systems for heat, dust and chemical influences. At the same time, they take into account the needs of employees and support processes, productivity and safety. Our experts provide individual advice in order to implement the optimal solution for every area of application – from metal companies to cleanrooms.

OPTIMAL LIGHTING FOR OPTIMAL RECOVERY

Health and care facilities place the highest demands on light. Tailor-made lighting solutions support medical staff with optimal visual conditions and at the same time promote the well-being of patients. High light quality, intelligent control and circadian lighting effects contribute to recovery, regulation of the sleep-wake cycle as well as more quality of life and energy efficiency. Especially for age-appropriate living and care, higher illuminance, reduced glare and dynamic light gradients provide better orientation and support a self-determined life in old age.

1

SMART CARE

Digitalisation in lighting solutions has transformed how healthcare facilities control and manage lighting: providing greater control, adaptability and energy efficiency, all while enhancing the overall experience for residents and caregivers. Smart lighting systems like LynX® are specifically developed to meet practical and emotional needs to healthcare, promoting well-being, security, energy savings and assisting staff.

HEALING ARCHITECTURE

Artificial light is a key element of the built environment and an advanced solution can support physical, mental and emotional healing. Zumtobel's holistic approach to lighting solutions, goes beyond function and aesthetic. It promotes health and well-being among the users of the building, aligning with healing architecture principles. Our enhanced lighting quality promotes targeted regeneration and mental support, as well as precision and concentration – wherever and whenever doctors, patients and caregivers need it.

HUMAN SUSTAINABILITY

Only when human needs are combined with a high commitment to sustainable building can the creation of health centres, hospitals and care facilities that will serve many generations to come become a reality. Human sustainability is not only concerned with decarbonisation (CO₂ reduction) – patients, persons needing care and staff should also feel comfortable spending time in the building. The balance of ecological objectives and human needs are a key factor in the creation of a long-term sustainable building.

TECTON II

Room for possibilities. Light for the future.

15 poles for maximum connectivity – from intelligent lighting controls to the Internet of Things (IoT). Modular design to enhance your planning freedom. Metric system for perfectly matched tracks and light bars. Architectural design and timelessly elegant styling by Pininfarina. Lets the space do the talking and technology fade into the background. Continuous power tapping from the start to the end of the track, allowing maximum flexibility in its configuration. Tool-free installation, faster and more intuitive than ever. Designed according to holistic sustainability criteria. Extremely energy-efficient and ready for the circular economy.

About the product

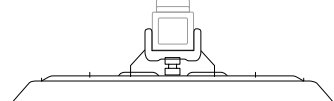

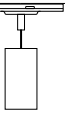

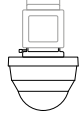

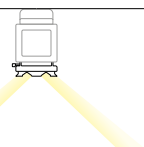

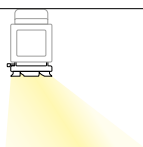

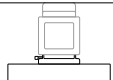

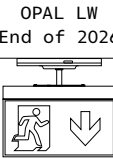

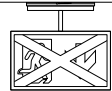

"Pininfarina rely on a clear, user-oriented design for creating TECTON II, avoiding any superfluous details. Every line and every shape follows the aim of making light the focus, positioning it as the central protagonist."

Design: Nicola Girotti
Head of Product Design, Pininfarina

TECTON ⚡ DC

ZUMTOBEL

TECTON DC

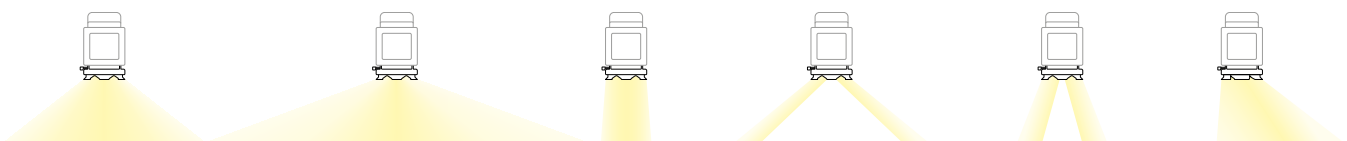

Into the future of energy with direct current.

TECTON DC – one of the first of its kind – switches from alternating current to direct current. The new Zumtobel lighting line relies on direct current. With the highest safety standards and proven flexibility, it can operate at a nominal voltage of 650 volts. This opens up completely new ways for TECTON DC to produce electricity from renewable energy and smart DC grids, with minimal loss. Whether as a DC light strip or as a slim conversion kit, even small changes can enable industrial companies to take major steps toward the energy future.

TECTON IP64/IP54

IP – two letters, one promise: TECTON IP64/IP54 makes the advantages of the tried-and-tested continuous-row lighting system available for demanding industrial environments. The dustproof and splashproof TECTON IP64/IP54 variant can be used wherever metal, wood or paper is processed, food is kept cool, or car parks are lit. Quick, tool-free installation. 100% flexible – can be fitted with general lighting, safety lighting and lighting management.

MSSENS HC TEC

ZX/ZX2 LED

The ZX continuous-row lighting system uses Zumtobel trunking (ZT) or Zumtobel trunking high (ZTH) as the basis on which ZX luminaires are mounted. From 2007 onwards, both the trunking and the luminaires were brought together under the name ZX2 as a system with new through-wiring.

In order to continue using existing ZX/ZX2 continuous rooflights efficiently, Zumtobel offers the ZX/ZX2 renovation beams: a simple 1:1 solution for the replacement of T16 58W luminaires. This allows existing installations to be modernised and adapted to the state of the art without intervention in the DIN rail.

SLOTLIGHT INFINITY II

SLOTLIGHT – the unique light line since 1999.

Improved optics, timeless design, maximum efficiency and even greater project design freedom: SLOTLIGHT infinity II is continuing the success story of Zumtobel's light line. It can be unrolled to any length, without interruption, as a continuous line or around corners, in a creative X or T shape. Conceived using Zumtobel's Circular Design Rules, it can be configured in just a few clicks, with effortless customisation. Whether in an office, educational institution, airport, art gallery or shopping centre: SLOTLIGHT infinity II provides a reliable basis for any number of applications. With IP54 degree of protection and emergency lighting in all standard lengths.

SLOTLIGHT INFINITY 45

Extra-narrow precision.

Continuous lines of light are a central design element in modern architecture. SLOTLIGHT infinity 45 interprets this principle in its purest form: a third narrower than the standard family and with a width of only 45 mm, it is an exceptionally slim lighting tool. As a linear design element, SLOTLIGHT infinity 45 opens up almost unrestricted creative freedom. The precise light line can be elegantly integrated into ceilings and supports architectural concepts with clarity, restraint and technical ingenuity. For lighting solutions that are visibly reduced and, at the same time, maximally effective.

CRAFT II

The power pack that lasts.

CRAFT II – these are not just two powerful new high-bay luminaires. CRAFT II is more than that: it's the first generation of Zumtobel high-bay luminaires based on the platform principle. Not a fixed stand-alone solution, but a tailor-made system. Maximum performance. And perfectly adapted to the requirements of the relevant operation.

About the product

CRAFT II performance
The robust lightweight

CRAFT II plus
The unbeatable power pack

Sustainably produced, powerful in action: housed in a lightweight yet sturdy sheet steel housing, the CRAFT II performance is a highly efficient high-bay luminaire.

Extremely versatile thanks to seven different light distribution curves. And with housing "Made in Germany", in a zero-carbon production process.

Protective shield made from a single mould: CRAFT II plus is created using the aluminium die-casting process. The luminaire is distinguished by its impressive resilience and revolutionary thermal management – even when faced with challenging ambient temperatures and extreme mechanical or chemical stresses.

HACCP

CRAFT II

Revolutionary thermal management.

The CRAFT II plus uses two fundamental principles of physics, the Venturi effect and the Coandă effect, to cool and clean itself. The result: the innovative high-bay luminaire is in a completely different class from its predecessor model and can withstand high ambient temperatures (up to 70°C) – throughout its entire lifetime of around 100 000 hours. To achieve this, CRAFT II plus relies on an intelligent interplay of air pressure, air speed and air temperature. And all in an aluminium housing with excellent thermal conductivity.

About the product

1

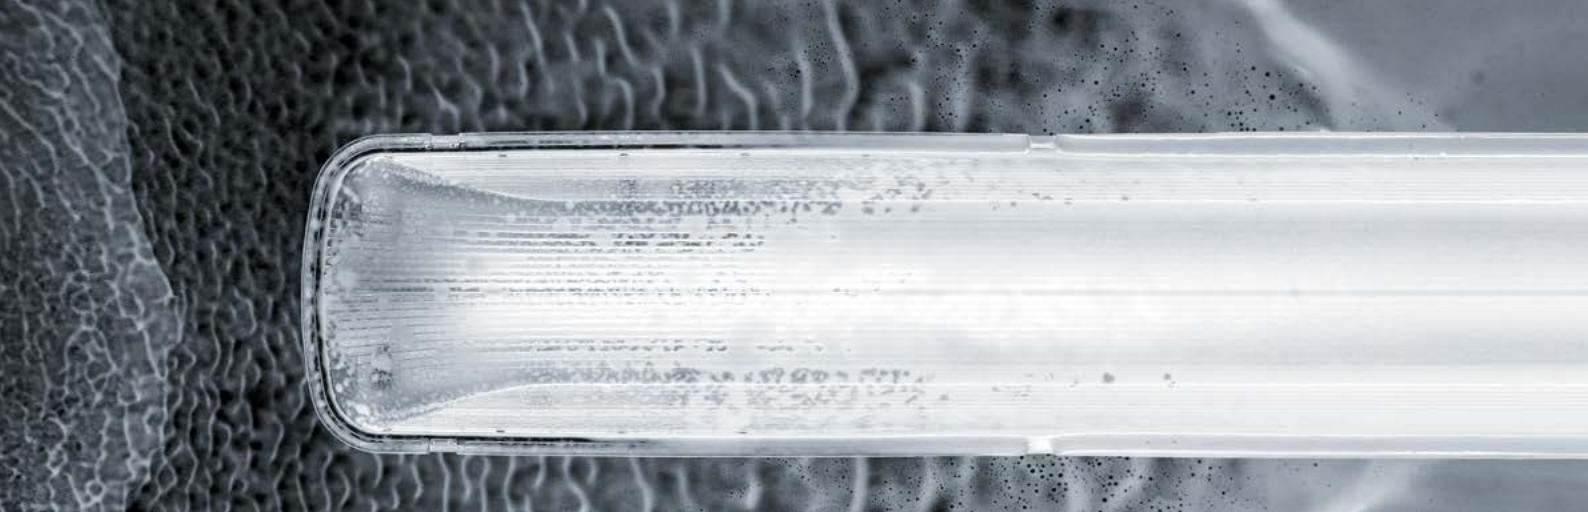

Self-cleaning thanks to the Coandă effect.

The Coandă effect is a principle of physics used in the aviation industry and applied to CRAFT II plus: a pressure imbalance presses the airflow against the curved surface of the luminaire. This efficiently cools the LED boards in particular. At the same time, the airflow also removes everyday dust from the surface of the luminaire.

2

Efficiently cooled thanks to the Venturi effect.

Specially designed nozzles in the body of CRAFT II plus generate negative pressure – and thus ensure that the air circulates at a high speed between the LED drivers and LED boards. The so-called Venturi effect cools the CRAFT II plus luminaire very efficiently and allows the power pack to be operated even at extremely high ambient temperatures.

AMPHIBIA

Built to resist.

Both on land and in water. Both powerful and durable: “amphíbios” is an ancient Greek word meaning “both kinds of life”. True to its name, the AMPHIBIA moisture-proof luminaire offers excellent light output in challenging industrial applications. Dust-tight and protected against splash water. Temperature-resistant as well as resistant to chemical and mechanical influences. A robust product family for versatile tasks.

CLEAN II

Pure light you can rely on.

In the hospital, in the laboratory, in food production. The Zumtobel CLEAN II in the supreme and industry variants take on these special lighting tasks. With their ultra-resistant, discreet design, they focus on the essentials: pure light for cleanroom environments. This cleanroom luminaire family has been developed in accordance with strict hygienic design principles, in line with cleanroom requirements, and is highly efficient. The result is effective lighting for all visual tasks in the cleanroom. Form follows function.

CALMEA

Aesthetics – redefined.

CALMEA, modul technik bed head luminaire with know-how and lighting equipment from Zumtobel is a stylish single-bed light specifically designed for use in healthcare settings. It provides flexible lighting that enhances patient comfort and supports the efficiency of healthcare staff. CALMEA meets the key lighting requirements in hospitals and care facilities, including general lighting, reading light, examination, and night lighting.

With high colour rendering and adjustable colour temperatures, it not only ensures optimal lighting conditions but also creates an inviting, cozy atmosphere with its sleek, minimalist design. The attractive design and versatile lighting settings promote a pleasant environment for patients. Thanks to various mounting options, CALMEA can be effortlessly integrated into any room concept.

About the product

modul
TECHNIK

General lighting
Indirect lighting is used to create a cozy and homely atmosphere.

Simple examination lighting
Reading light and indirect light serve as examination lighting for simple examinations.

Examination lighting
For examinations and treatments, an additional examination light can be activated alongside the indirect lighting and reading light.

Reading light
The glare-free reading light ensures the required level of brightness and high uniformity on the reading surface.

Night lighting
A separate night light provides the necessary illumination for orientation during the night.

BATTENS

LINARIA

84

LINARIA

**A slender line that consistently
gives preference to the architecture.**

The creation of elegant light lines is the main purpose of the delicate LINARIA batten luminaire.

This is made possible by various lengths that can be joined to form light lines. At a system efficiency of approximately 140 lm/W, LINARIA presents itself as a trendsetting lighting solution with class. LINARIA has many assets.

MELLOW LIGHT EVOLUTION/INFINITY

The daylight classic.

It is a well-known fact in architecture:
the bigger the cubic content, the more difficult it is to
guide daylight into the inner areas. MELLOW LIGHT plays
with light. It brings the depth of the room to life in
the mellow colours of the sky until late at night.
Walls and ceilings begin to breathe and give people
a renewed sense of outdoor freedom.

MIREL EVOLUTION

The most progressive shape of louvre luminaires.

MIREL evolution represents a further stage of development for the louvre luminaire. Zumtobel has met the challenge of integrating energy-efficient LED technology into the tried-and-tested design by giving the luminaire an original appearance: users can actually see the LED modules in the MIREL evolution. With a clear and discreet design that can be used universally, the luminaire fulfils its great potential for light quality and energy efficiency.

COESA

Quality lighting for quality control.

Intelligent machines are increasingly replacing manual labour, yet people are still crucial when it comes to quality control. Why is that? The human eye has the unique capacity to check for subtle flaws and irregularities on different surfaces. However, detailed inspections can only be performed effectively in optimal ambient conditions – making quality lighting an essential part of the surface inspection.

SLOTLIGHT ROUND

A luminous beacon of tranquillity.

Thanks to its design, the surface-mounted and pendant luminaire rounds off the SLOTLIGHT portfolio in the most literal sense. The luminous circle is an emotive eye-catcher that enhances entrance areas, offices, meeting and recreation rooms, canteens and retirement homes. And you can have more than one, of course. SLOTLIGHT round combines aesthetics and functionality, using direct and indirect light, high luminous flux and good glare control to handle challenging visual tasks and create a pleasant atmosphere.

About the product

SOLENA

Technical precision and enigmatic brilliance.

SOLENA connects form, function and aesthetics, resulting in a distinctive signature design that is radical in its simplicity but yet changeable in appearance. It consists of a glass cylinder with crystalline clarity, with a carefully balanced, visible construction. High-precision photometrics provide an efficient illumination, while a fine glimmer of light visually models structures and gives the room an atmospheric depth. It is a unique luminaire that is defined by the dialogue between light, architecture and the specific spatial environment. Embedded in the sustainability concept of the architectural project "Hortus", it meets the highest standards of aesthetic quality and ecological responsibility. Light can support the uniqueness of the space it is in. SOLENA was born out of this dialogue. Orchestrated and shaped by the handwriting of visionaries now ready to be brought to the market by Zumtobel.

LERIMA LINEAR

LERIMA is the new extensive and scalable indoor lighting portfolio solution for modern work and learning environments.

With its unified design across a wide range of sizes and mounting options (surface, pendant and track) LERIMA ensures visual consistency and architectural flexibility. Featuring the microprismatic or innovative eclipse optic, it delivers uniform, glare-controlled illumination with reduced lighting artefacts. Combined with the mountingGO quick-install system and Zhaga Book 20 upgrade bay, LERIMA offers fast installation, future-proof connectivity and sustainable life cycle value.

ARTELEA
Wall luminaire

"The ARTELEA freestanding luminaire series adheres closely to the criteria of circular design. An innovative docking port system enables the freestanding luminaire to be reconfigured or modified at a later date, making ARTELEA the perfect solution for future-proof, long-lasting and flexible office applications."

Design: Harald Gründl, E00S

reddot winner 2024

LINETIK

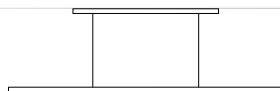

Impressive lighting comfort in a striking design.

The LINETIK line of freestanding luminaires enables you to create solutions for unusual room shapes with complete flexibility. The long lighting head illuminates workspaces with a uniquely even and balanced light of around 500 lux, ensuring full compliance with the requirements of EN 12464.

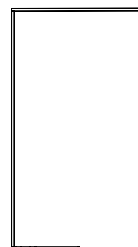

Indirect light directed towards the ceiling generates a welcoming atmosphere in your space.

About the product

LINETIK
Pendant luminaire

LINETIK
Freestanding luminaire

"LINETIK shows which possibilities there are today in LED and control technology to provide the user with the maximum lighting comfort. LINETIK is unobtrusive and integrates in every office landscape; nevertheless it is an expressive design statement."

Luke Smith-Wightman

reddot award 2019

EPURIA

Freestanding and straightforward.

The design language of the linear EPURIA luminaire is simple yet modern. User-friendly flexibility allows the luminaire to be easily integrated into any office layout. The soft indirect lighting combined with homogeneous, direct light that effectively reduces glare provide atmospheric lighting for any room.

About the product

EPURIA
Freestanding luminaire

About the product

CANDILEA

Because function is key.

Simple, beautiful, quick to install – CANDILEA features a clever design paired with elegant lines. Timeless design for the changing world of work.

About the product

LERIMA FREESTANDING

LERIMA is the new extensive and scalable indoor lighting portfolio solution for modern work and learning environments.

With its unified design across a wide range of sizes and mounting options LERIMA ensures visual consistency and architectural flexibility. Featuring the microprismatic or innovative eclipse optic, it delivers uniform, glare-controlled illumination with reduced lighting artefacts.

TALUNA

Simplicity is the highest level of sophistication.

TALUNA redefines reduction and condenses the concept to its essential task of creating reliable, uncompromising light. The luminaire combines technical clarity with a modest presence. Simplicity is the highest form of sophistication. A carefully selected colour palette guarantees the harmonious integration into space. Fine pastel shades can set accents or blend discreetly into private or professional interiors. By doing so, TALUNA becomes an unobtrusive part of the environment, it creates an atmosphere and becomes a form of personal expression. Reduction of clutter brings efficiency to the construction. With standard parts, simple connections and a focused choice of materials, this concept concentrates on circularity.

PANOS III

The new dimension of energy-efficient downlight luminaires.

With improved energy efficiency, reduced mounting depth and integrated sensors, PANOS III **IN** remains the benchmark for flexibility and modularity. Its signature glare control and premium light quality ensure a solution for a wide range of applications, while new acoustic and decorative options provide total creative freedom for office, health and care, education and retail environments.

PANOS III evolves across all architectural lighting applications in a wide range of new formats as a PANOS III **ON** illuminating object, offering maximum flexibility for 3-phase track systems and TECTON trunking beyond surface-mounted and pendant variants, including sustainable decorative options. Still within the PANOS category, a completely unique new shape, PANOS linear, is being launched, also for interior architectural lighting, featuring a slim minimalist format with an elongated rounded silhouette, with a uniform light surface that lends modern spaces a sense of calm elegance.

About the product

"PANOS is adapting and evolving with the innovations of new architecture. PANOS III provides new solutions for lighting applications both inside and outside the ceiling, maintaining its 'Pantheonic' characteristics and design."

PANOS EVOLUTION/INFINITY

Kits for functional and architectural lighting tasks.

The wide range of models perform different lighting tasks brilliantly – from the homogeneous illumination of vertical or horizontal surfaces to the creation of precise accents. The unobtrusive manner in which both downlights and wallwashers blend in with their architectural surroundings makes the PANOS evolution/infinity kits the perfect lighting tool for designers and planners. From reception areas, corridors, offices and conference rooms to shops and museums – the luminaires provide the right lighting for any environment, thanks to impressive efficiency and service life, colour rendering of up to $Ra > 90$, precision-moulded reflectors and a future-proof modular design.

DIAMO

Brilliant lighting quality for the creation of powerful accents.

DIAMO, which incorporates unique lighting technology developed jointly with experts at Bartenbach GmbH, based in Aldrans near Innsbruck, is a highlight in the world of miniaturised recessed luminaires: intelligently designed reflectors ensure accurate light distribution by the high-power and efficient LED modules, without any spill light, as well as perfect glare control. The result: high-intensity pinpoint accent lighting with excellent lighting quality and maximum brilliance. DIAMO combines all these features in an extremely compact design, thus providing for new creative freedom in numerous indoor applications.

Originalgrafik

Hundertwasser arbeitete mit zahlreichen grafischen Techniken, darunter Lithografie, Siebdruck, Radierung und Farbholzschnitt.

Er war ein Vorreiter beim Einsatz neuer Materialien und der Entwicklung neuer Techniken. So verwendete er fluoreszierende Farben, reflektierende Glasperlenauflagen, Samtaufblasungen, Metallfoliendruck und Prägedruck. Zudem kombinierte er unterschiedliche Druckverfahren.

Hundertwassers Ziel war es, entsprechend der Vielfalt in der Natur auch in der grafischen Kunst Unikate herzustellen.

So wollte er die Druckmaschine, die stets das Gleiche produziert, „überlisten“. Jedes Blatt einer Auflage sollte verschieden sein von allen anderen. In enger Zusammenarbeit mit den Druckern entwickelte er eine Vielzahl von Farb- und Formvarianten. Hundertwasser strebte eine völlige Transparenz hinsichtlich Technik, Entstehungsdatum und Auflage an.

Auf vielen Grafiken finden sich neben der händischen Signatur und der Nummer des Blattes auch Auflistungen von Farbvarianten, technischen Verfahren und Auflagenangaben. Diese wurden geprägt, gestempelt oder mitgedruckt.

VIVO II

Perfectly coordinated variety.

VIVO II not only impresses with its uniform design: the values that it encapsulates are unparalleled. For the first time, the electronics are fully integrated into the housing or track. With its remarkable collection of designs, the range is suitable for even the most challenging of lighting tasks. High lumen packages in small, compact designs, three different sizes, accessories that make tasks more flexible and technology that is easy to adjust on-site. A range made using environmentally friendly production processes and recyclable materials. A talented all-rounder for perfect lighting arrangements in an array of application areas – from the retail sector to the field of architecture.

VIVO II ART

Light becomes the storyteller.

With VIVO II art, art becomes authentically tangible.

The spotlight family combines the highest colour fidelity and precision-free light spill with a comprehensive portfolio of accent, wallwasher and framer solutions. This creates new opportunities for creative design that impressively stages objects and transforms spaces into emotional experiences. Using a lens as an optical system allows for extremely precise light distribution, with significantly reduced light scatter compared to reflector optics. As a result, you get high uniformity and strong contrasts. Artworks are illuminated with the maximum amount of light, without disruptive light scatter – for an exceptional perception quality with vivid colour rendering.

SCENO

Impactful product presentation.

Showcase products perfectly. With clever accents for shelf lighting and restrained contrasts between light and shadow, SCENO captures and gently guides customers' attention. Ideally suited to the sales psychology of supermarkets and retail spaces. Highly versatile and adaptable to a range of spaces and uses. With brilliant, precise light and subtle design. SCENO: a stimulating atmosphere for every purchase.

About the product

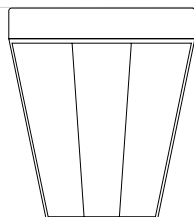

EVIO II

The best light, maximum planning freedom.

Two options – two equally diverse ranges of possibilities: with the EVIO II, we offer light in two different forms for two different infrastructures. Whether for the TECTON continuous-row lighting system or for your 3-phase track. Whether as a slimline or as a flat panel luminaire. Whether for supermarkets or shops. Whether for aisle or shelf lighting. Wherever retail companies present themselves in the best light, the EVIO II impresses with its flexible design options: this is guaranteed by the different combinations of optics and the rotatable panel.

About the product

EVIO II panel
Compact panel luminaire

EVIO II linear
Slimline luminaire

IYON

Maximum LED efficiency in a sophisticated design.

The design aspects of IYON suggest constant movement and liveliness as an interpretation of infinite mutability. The fluid interaction between object and medium conveys sensuality and a high level of functionality. Variable lighting scenes and targeted spatial positioning go hand in hand with the way in which the light source continuously transforms itself.

Velvet matt surfaces and a sophisticated design hint at the function-focused, individually controllable lighting technology incorporated in this highly versatile spotlight.

About the product

IYON
Spotlight

"The symbiosis of light direction and proportion as parameters of design affects people's sensory perception and at the same time determines the physiological sensation of a room's quality."

SUPERSYSTEM INTEGRAL

Seamless and linear.

Integral. Because variety integrates perfectly into architecture. The defining feature of the entire product group is seamless linearity – regardless of whether SUPERSYSTEM is used integrally as a single luminaire or installed on a track. Surface-mounted, built-in or pendant. Even with a channel, if required. And for the first time, this solution can be used for all types of lighting: from horizontal to vertical, from indirect to accent lighting.

"The comprehensive planning tool is based on the poetic idea of stringently miniaturising the spotlight heads, enabling them to be perfectly integrated into a continuous linear structure. The system magically emits light from a slender groove as a recessed or track fitting. SUPERSYSTEM integral even makes it possible to adapt existing track installations, which improves efficiency and saves resources – and helps this system make an important contribution as a sustainable design solution."

Design: Harald Gründl, Designer, E00S | AT

reddot winner 2020

TRACKS

The basis for your lighting solutions.

Zumtobel offers an extensive range of tracks and accessories to help you create the perfect infrastructure for spotlights, linear luminaires and wallwashers. Various ceiling and wall-mounting options offer more scope for creative design. The use of DALI in the tried-and-tested 3-phase track enables digital lighting control. The miniaturisation effect is topped off by the slimline low-voltage tracks. A particularly compelling argument at the moment: in order to conserve resources, tracks are simply reused when lighting is upgraded.

ACOUSTIC ELEMENTS

Shapes that give freedom.

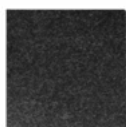

Acoustics are more than just effective noise reduction.

In combination with light, acoustics unfold their full effect.

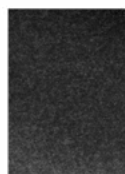

Together, they add character to rooms and create an atmosphere in which you feel comfortable. Acoustic elements, as independent design features, harmoniously integrate into the architecture. They can be suspended or attached to the wall and ceiling. Through the use of colours, surfaces and flexible arrangements, solutions are created that enhance rooms both acoustically and aesthetically.

ONDARIA II

Beautifully recreating nature.

The timeless design of the ONDARIA II luminaire perfectly complements a variety of different room concepts. Whether recessed, surface-mounted or as a pendant luminaire – the clear geometry enhances the architecture without detracting from the interior styling. This makes it just as attractive for reception and waiting areas as for break-out zones or general lighting in a retail environment. With its round shape, the luminaire can be positioned anywhere in the room without changing its direction, while maintaining the same quality of light.

BASICDIM WIRELESS

State-of-the-art lighting controls do not need cables.

Luminaire and app. No extra cables. No additional control components.

The basicDIM Wireless lighting controls for individual rooms adapt effortlessly, whatever the situation – whether in a new building or an existing space, for additional luminaires or a lighting conversion. Even sensors and wall switches can be integrated easily and wirelessly. Via the DALI gateway, basicDIM Wireless luminaires can be efficiently connected to LITECOM, enabling functions such as wireless monitoring of emergency luminaires.

BASICDIM ILD G2

The local sensor-based plug and play control.

basicDIM ILD G2 is a sensor-based, plug-and-play lighting control solution designed to deliver immediate energy savings with minimal complexity. By combining presence detection and daylight-based control in one compact DALI-2 system, it ensures that light is only used when it is truly needed – and exactly at the right level.

This is smart lighting control reduced to what really matters: efficiency, comfort and ease of use.

CROSSIGN PRO SAFETY LUMINAIRE

CROSSIGN PRO is not only a safety sign luminaire.

It is also a high-performance safety luminaire. It can provide escape routes (escape) or rooms (antipanic), as well as options for high ceilings (HC types) or higher illuminance or distances (HP types). With IP42 or IP65 protection, it offers a solution for any application.

As an industrial variant (CSPI) with IP66 protection and in three materials (PC, PMMA and chemo), it demonstrates chemical resistance and withstands even the most adverse environmental conditions.

SMARTSIGN

Dynamic safety sign luminaire.

SMARTSIGN is the dynamic safety luminaire by Zumtobel, equipped with a high-quality LCD TFT screen. All ISO 7010 characters are already pre-installed on the luminaire. Thanks to additional flashing patterns and image sequences, attention can be drawn in an emergency, optionally with specially entered warning texts. Thanks to a specially adapted display and software features, the luminance remains constant over the service life. This is a luminaire that shines with reliability, protects against dangers in the event of an emergency, and shows the fastest way out of the building.

About the product

IP40

Recognition distance 38m

EN 1838 | DIN 4844

SMARTESCAPE

Intelligent escape route guidance.

nBox just got smarter. Thanks to the SMARTescape software license, dynamic escape route guidance planning is now possible. From the selection of appropriate pictograms in both normal and emergency operations to detailed scenario planning, the system is intuitive. For example, the nBox can be used with external systems such as a fire alarm system or can be controlled via manual inputs – for greater safety in buildings, even in acute hazard situations.

CUBESIGN II

**Rescue cube with
a high degree of protection
and detection distances.**

The new CUBESIGN II cube shines with its IP54 protection and two different sizes: CUBE-150 with a 30 m detection range and CUBE-300 with a 60 m detection range. Frameless or with a high-quality aluminium frame, it can be used as a single or central battery solution. It can also be implemented with mounting accessories, allowing a wide range of installation options.

About the product

IP54

Recognition distance 30m/60m
EN 1838 | DIN 4844

ARTSIGN

The small design sensation.

ARTSIGN is the smallest escape sign luminaire in the Zumtobel portfolio. With a recognition range of 15 m, it is roughly the size of a postcard and blends harmoniously into any room. LED technology supports reliable operation over a long lifetime with absolutely no maintenance.

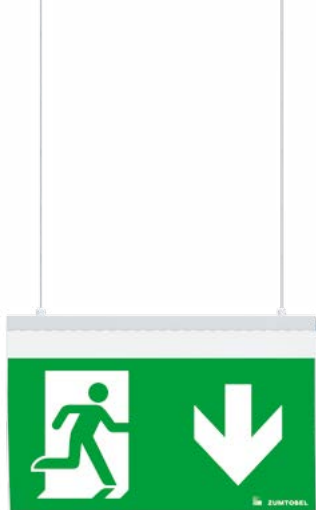

About the product

IP40

Recognition distance 15m
EN 1838 | DIN 4844

Design: Matteo Thun

COMSIGN

The peak of LED technology.

COMSIGN is simply perfect – in many ways. Thanks to the transparent acrylic glass, the luminaire appears to float in the room. A surface-mounted element in high-quality aluminium rounds off the delicate design.

The gently curved wedge shape takes on both aesthetic and functional tasks.

About the product

IP42

Recognition distance 30m

EN 1838 | DIN 4844

Design: E00S

PURESIGN

Great lighting technology in a slender design.

Zumtobel has collaborated with the renowned EOOS design studio to develop emergency sign luminaires that fuse clear functionality with an elegant design – a look so sophisticated that PURESIGN won the iF Design Award. Boasting a width of just 20 mm, this slimline luminaire is strikingly elegant, even in the duplex version.

About the product

IP42

Recognition distance 30m

EN 1838 | DIN 4844

Design: E00S

CROSSIGN PRO

The modular safety luminaire for every application.

CROSSIGN PRO – the new platform form includes three different sizes: CSP 55, CSP 120 and CSP 160.

The luminaire comes in IP42 or IP65 protection and can be installed in the TECTON II or the integrated 3-phase rail. Thanks to integrated ERI spots with greatly improved performance, the escape route can be optimally marked and illuminated at the same time.

About the product

CSP 55	CSP 120	CSP 160
IP42/IP65	IP42/IP65	IP42/IP65
Recognition distance 11m	Recognition distance 24m	Recognition distance 32m

CROSSIGN PRO INDUSTRY

The specialist for harsh environments.

CROSSIGN PRO industry was designed for the most adverse environmental conditions. With a protection rating of IP66, it is dustproof and resistant to strong water jets, and with an impact resistance of up to IK08, it is also extremely durable. Thanks to the use of three materials (PC, PMMA and chemo), it also offers the highest chemical resistance and can be used in a variety of challenging environments.

RESCLITE PRO APP

The RESCLITE PRO app makes emergency lighting planning a breeze: after only three clicks, the chosen mounting distances between two luminaires and those for the wall are displayed for the chosen mounting height. An article number is displayed automatically and linked directly to the data sheet for further information.

The app is available as a homepage for laptops or as a dedicated smartphone app (iOS and Android).

resclitewebapp.zumtobel.com

ESCAPE-SIGN LUMINAIRE APP

Finding the perfect solution is quick and easy: with just a few clicks, the Zumtobel escape-sign luminaire app takes you to the best product for the application and enables simple lighting design for the ERI spots. The app is available in a Web version and as a native app for iOS and Android.

signwebapp.zumtobel.com

Every app featured on these two pages can be found on both the App Store and Google Play Store.

PROset TOOLS

PROset pen and PROset app.

Thanks to the PROset technology, the luminaire can be addressed and configured contactlessly and in a matter of seconds.

Simply attach the PROset pen or PROset app to the control gear, and the luminaire is configured.

About the product

LITECOM UND EM APP

The emergency lighting system with self-contained power supply.

Self-contained emergency lighting systems have one feature in common – the battery fitted into every luminaire. In emergency operation, this provides the lamp with power so, for example, it can prevent panic reactions, ensure the safe evacuation of the workplace and illuminate the escape route.

About the product

Small and medium-sized properties

Extremely easy to install

Auto test or system monitoring
using DALI or Wireless

NBOX

Magnificent small- group battery system.

A group battery system with dimensions as small as this is rare. Yet the nBox effortlessly outshines similar systems. With 48 V low voltage, state-of-the-art communication technologies and handy apps, technical variety is seen in its best light: Secure. Simple. And reliable.

About the product

Medium-sized properties

Extremely easy to install in the fire zone

System monitoring
using POWERLINE

ONLITE CENTRAL eBOX

**The efficient, intelligent
central battery system that's
extremely easy to install.**

The ONLITE central eBox is a central battery system optimised for efficient LED technology. Both power consumption and the number of batteries required have been minimised.

About the product

Medium to large properties

Flexible modularity

System monitoring using DALI,
POWERLINE or circuit monitoring

ONLITE CENTRAL CPS

**Connected central battery system
that adapts to your project.**

As a modular system, this central battery system adapts precisely to the project and customer requirements as necessary. The system is available with DALI communication or as a circuit monitoring system.

REFURBISHMENT

Lighting refurbishment for the circular economy
Refurbishment kits

202
204

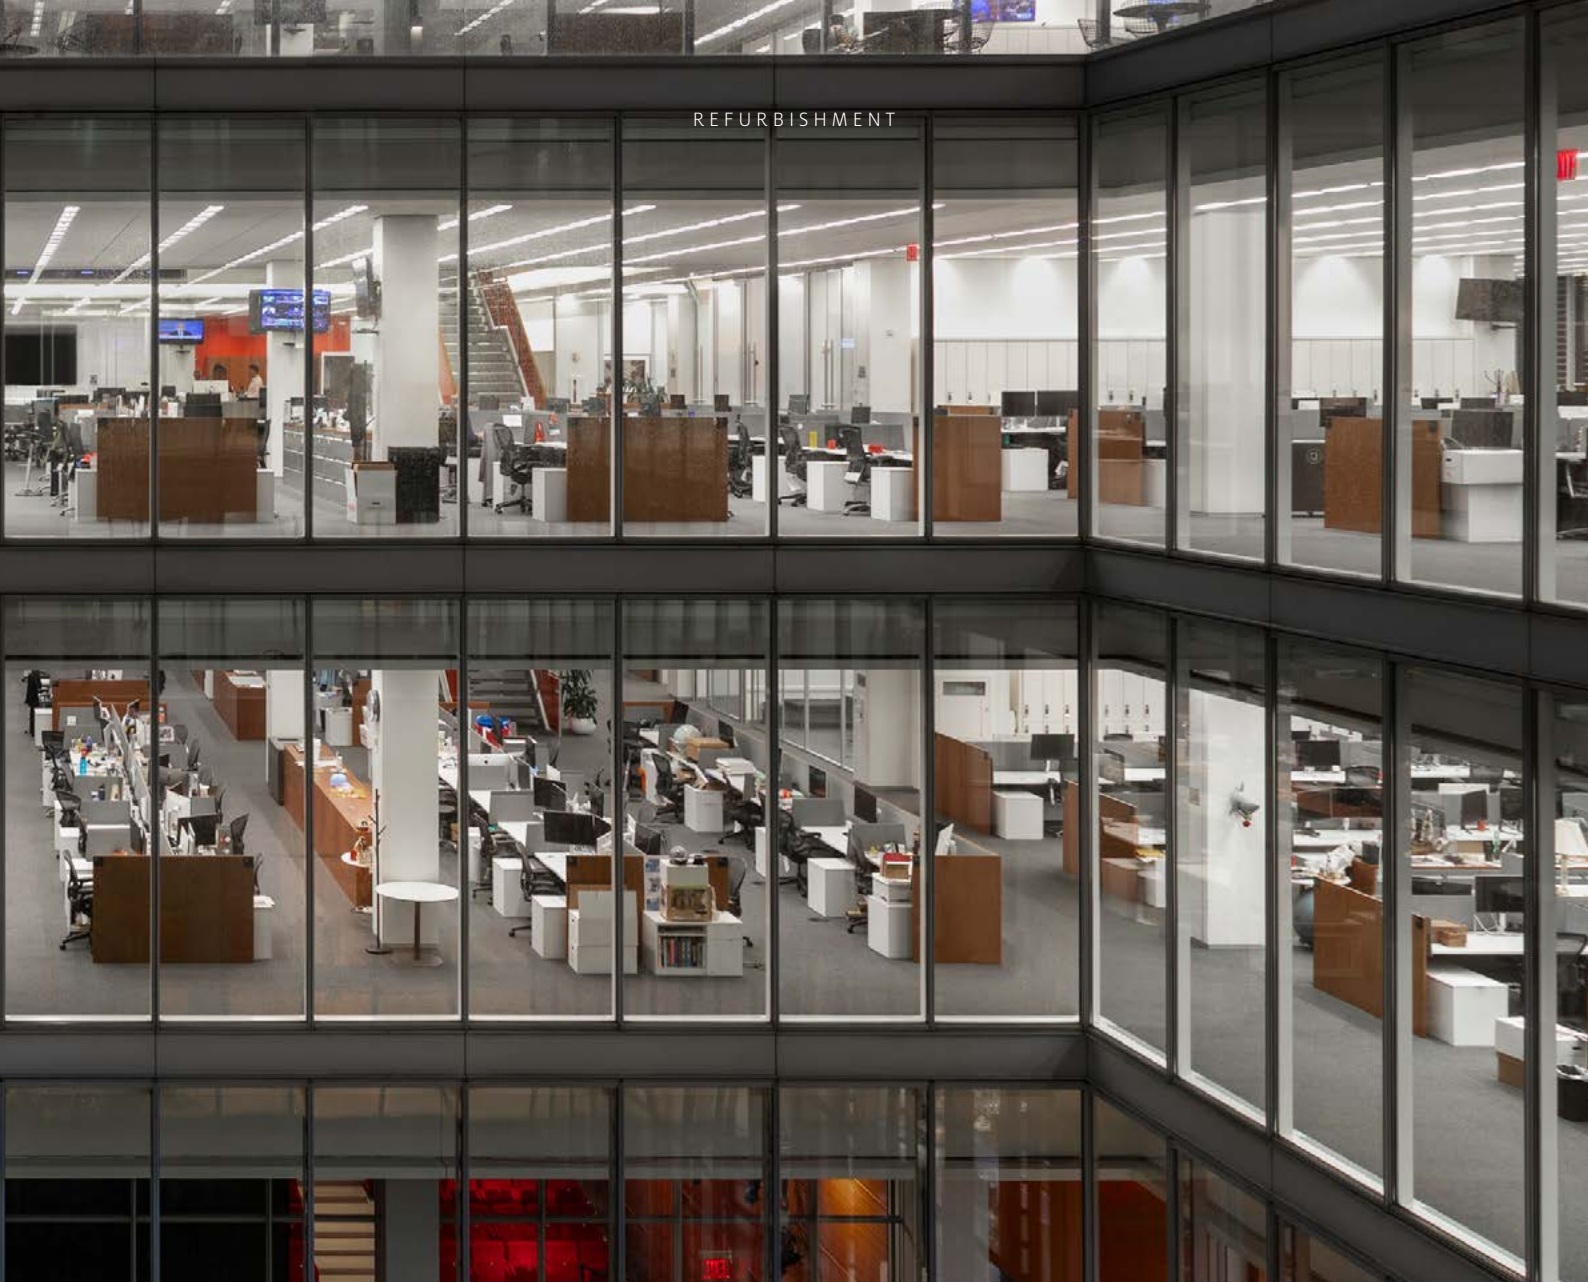

The New York Times, New York | US

LIGHTING REFURBISHMENT FOR THE CIRCULAR ECONOMY

While the construction and early usage phase of a building is primarily about saving energy and reducing CO₂ emissions, being able to flexibly repurpose, redesign or modernise existing spaces becomes particularly important in the second phase of the building life cycle (refurbishment, repair, modernisation).

Refurbishment kits

Refurbishment kits

This flexibility is currently required for refurbishments needed due to the discontinuation of fluorescent and halogen lights within the EU by 2023, which stipulates a switch to more sustainable LED luminaires. For refurbishment projects in particular, Zumtobel offers lean solutions that achieve maximum added value with minimum effort. With conversion sets as special or standard solutions – for example SLOTLIGHT, PANOS RETROFIT, ONDARIA, MIREL/MIRAL, CLEAN and pendant luminaires like CLARIS evolution – an essential cycle in the circular economy, with maintenance, refurbishment and upgrade (i.e. renovation and modernisation measures), is closed.

Benefits of the refurbishment kits

Instead of replacing the entire luminaire, the refurbishment kits mean that only parts need to be renewed or replaced. This has many advantages: existing resources remain in use in the long term. This promotes decarbonisation – and reduces costs. Because there's no need to invest in an entire new luminaire. The customer is also spared extensive refurbishment measures on the building because in many cases the ceiling does not have to be changed or damaged. The product stays on-site and moves into a second phase of use. This renewal process helps to improve the quality of light and reduce CO₂ emissions and save resources.

A look to the future

Zumtobel is already thinking ahead when it comes to the idea of the circular economy: more and more offers for the take-back and remanufacturing selected, new product families.

District Administration Feldkirch | AT

REFURBISHMENT KITS

The sustainable and fast way to retrofit

SLOTLIGHT

For a simple change from a conventional T16 to an efficient and continuous LED solution, you just need to replace LED strips and power cables and then securely seal them with a new cover.

TECTON

TECTON allows you to convert fluorescent lamps to various LED solutions for changing room and workspace requirements. No need to use any tools. Combine with safety luminaires, control components and sensors.

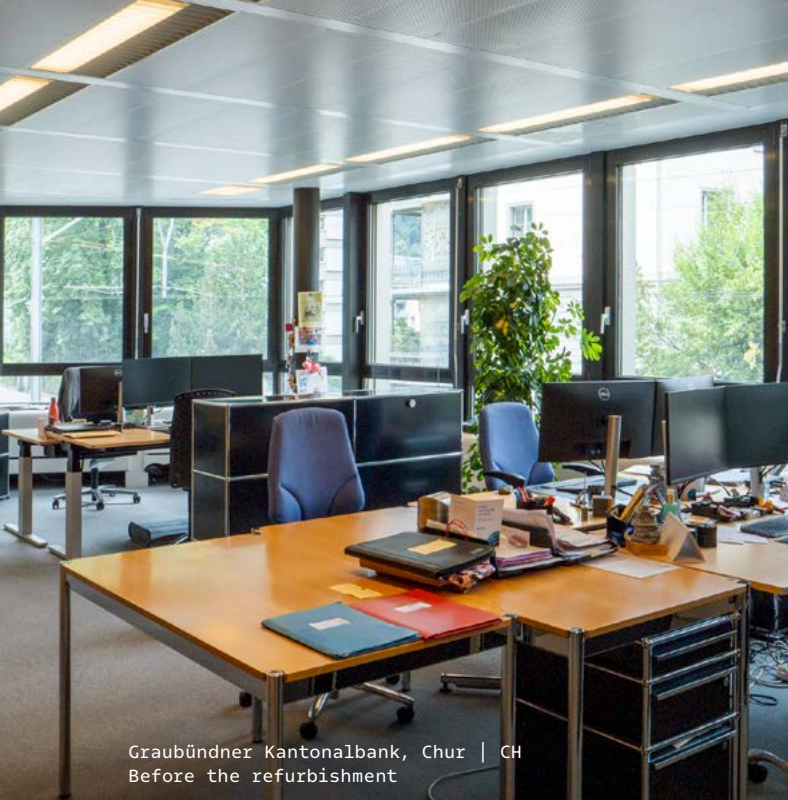

PANOS RETROFIT

With just three sizes, existing downlight installations in ceiling cutouts from 105 to 250 mm can be retrofitted with energy-efficient LED technology. The wide luminaire ring integrates elegantly into the ceiling, conceals existing cutouts and creates a consistently high-quality appearance.

CLARIS evolution

The pendant luminaires can be simply replaced using the conversion kit. All mounting points and suspensions from the predecessor T16 model can still be used by using an adapter plate.

Graubündner Kantonalbank, Chur | CH
Before the refurbishment

Graubündner Kantonalbank, Chur | CH
After the refurbishment

CLEAN

Turn CLEAN classic into CLEAN advanced with LED retrofit kits: sustainable, straightforward and cost-effective.

ONDARIA

There is a way to refurbish an ONDARIA T16 luminaire while saving resources. Simply use a new LED device holder, so you can preserve the existing housing.

MIREL and MIRAL

For straightforward replacement, we now also offer the MIREL evolution with LED.

ZX and ZX2

Update your light line without altering existing infrastructure.

SERVICES

All-round service for lighting systems

208

ALL-ROUND SERVICE FOR LIGHTING SYSTEMS

With Light as a Service (LaaS), you benefit from comprehensive project management and turnkey lighting solutions delivered by one trusted partner.

From initial planning and professional installation through to ongoing operation, maintenance and optimisation, we manage every stage of your lighting project. Our integrated portfolio of networking, system integration and digital services helps you improve sustainability, reduce operating costs and ensure your lighting infrastructure is future-ready.

Innovative lighting technologies can significantly improve energy efficiency, enhance lighting quality and make better use of available space.

Our flexible LaaS financing model also removes the need for high upfront investment, allowing you to spread costs through predictable monthly payments tailored to your specific requirements.
