

DEKO DG Classic

Style and Sound Classification in One

Glazed surface with a slim aluminium rim.

The DEKO DG glazed door is an elegant addition to our existing range of doors with exclusive finishes and high sound reduction. Like our other doors, this door can be installed in all types of wall.

The glazed door has been designed as a double layer of clear safety glass installed in an aluminium frame without the use of visible screws. This means that the door appears in a stylish, single-surface finish.

The DEKO DG glazed door is installed in our stable aluminium frame and provides a sound reduction of either R_w 26 or 35 dB with an acoustic strip at the bottom of the door leaf.

This door is available both as single and double doors and is supplied in the standard module of 9 x 21 M, but can also be supplied in other modules as required and as a double door in our standard size.

The inner frame of the door is covered as standard in aluminium coloured foil, but can also be supplied with foil in other colours. The door surface can be entirely covered, too, while still retaining its glossy glazed surface.

In addition, the glazed surface can be decorated with stripes, patterned designs or text in any colour as required.
